More information

Dosage & Administration

- The recommended dose for treatment of ulcerative colitis is 1g , four times daily up to 8 weeks. Usual dosage for maintenance of remission is 1.5g once daily.
- In acute attack initially, up to 4g daily in 2 to 4 divided doses. Intesa may be taken without regard to meals.

Breast Feeding & Pregnancy

- Low concentration of Intesa[®] and higher concentrations of its N-acetyl metabolite have been detected in human breast milk. The clinical significance of this has not been determined and there is limited experience of nursing women using -5ASA. B (no adequate and well-controlled studies in pregnant women)

Comparative Dissolution profile of Intesa[®] 500mg VS Pentasa 500mg

Intesa 500 mg is a first line treatment for patients with mild Crohn disease

- 5-aminosalicylates — The use of 5-aminosalicylates (5-ASA) for Crohn disease is controversial, and we limit its use to patients with mild Crohn disease with limited ileocolonic involvement who prefer to avoid glucocorticoids. For such patients, a slow release, oral 5-ASA agent is suitable.

Intesa 500 mg is a first line treatment for patients with mild Crohn's disease

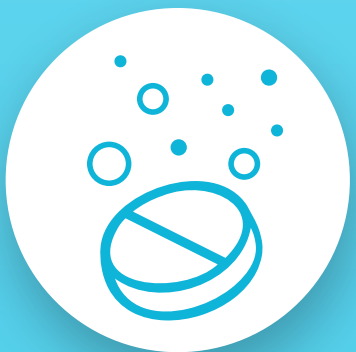

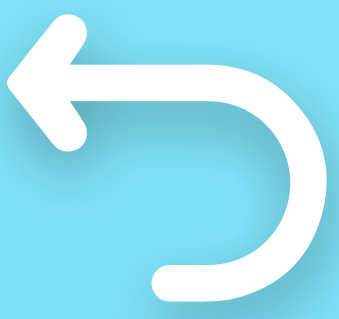

Mechanism of action

- The mechanism of action of Intesa is unknown, but it may be due to inhibition of prostaglandin and leukotriene synthesis in the gastrointestinal mucosa. So it is possible that 5-ASA diminishes inflammation by blocking production of Arachidonic acid metabolites.

Adverse Effects

- Headache, diarrhea, Upper Abdominal Pain, Nausea, Sinusitis, Nasopharyngitis
